I used a steel tape and magnetic compass in the establishment of new bearing trees. The magnetic declination used was 18° East. The distance to the bearing tree is to a 50d spike driven on the right side of the tree at the root crown. I attached a brass washer marked OPLS 2219 to the BT blaze. The bearing and distance to the iron pin was determined by a GPS observation using a Leica 500 base and receiver. The basis of bearing is that of survey number 041-2003.
